

YOUR BUSINESS TECHNOLOGY PARTNER

PRO-IT SERVICES - BUSINESS CONTINUITY

DATA BACK-UP ALONE IS NOT ENOUGH

Having a system that only backs up your data is no longer a comprehensive solution. In today's business environment, you need a platform that does much more than copying your data. Businesses today need to have a solution in place that will ensure their business can continue to operate no matter how big or small the interruption. ATS helps businesses implement a continuity solution on a single platform that will protect their data from multiple threats and will ensure any data interruption will only last minutes and not hours, or days or weeks!

Ransomware locks a victim's files and allows criminals to demand payment to release them. It is distributed in a variety of ways and is constantly evolving.

Human Error is the most common cause of business disasters! Most are unintentional and occur randomly. (ex: leaving computer systems unattended, opening emails with spam, visiting restricted websites)

Natural Disasters, small or large, can have a very disruptive impact on a business. (ex: earthquakes, electricity outages, floods)

Intelligent business continuity is thinking about your business on a higher level. ATS uses a hybrid cloud solution which guarantees complete uptime, and end to end encryption which protects data in transit and in the cloud.

We ensure your data is always:

Usable Non-corrupted Virus-free Available

Be Protected From Real Threats

Ransomware

- The United States has the most ransomware detections in the world
- There have been more than 4 million samples of ransomware in 2015, including 1.2 million new samples

Human Error

- Human error accounts for 52% of security and data breaches
 - Using weak passwords
 - Low Security Awareness
 - Carelessly Handling Data

Natural Disasters

- 62% of businesses reported loss of sales as the primary negative result of a natural disaster

Downtime is Costly

- An hour of downtime cost:
 - \$8,000 = for small businesses
 - \$700,000 = for large businesses
