# PRO-IT SERVICES CYBER SECURITY PROTECTION

## Essential

### Level 1 Security Assessment

A baseline assessment to identify what gaps currently exist in your network focusing on devices and endpoints.

### Web/DNS Filtering

Blocks threats at the domain level creating an extra layer of security from external threats to your network

### Malware/Email Filtering

Identifies and blocks threats that attempt to access your network via emails

### Employee Training

Provides resources to educate employees about cyber threats and creates false "threats" to determine at risk users

## Advanced

### Level 2 Security Assessment

A more in-depth assessment of the security risk within your network. Looks at files and logs and not just devices and endpoints.

### Mobile Device Management

Protects your mobile phone from being the entry point into your network. Provides protection if device is lost or stolen.

### Multi Factor Authentication

Provides multi level authorization amongst multiple devices protecting your endpoints from being compromised.

### Password Management

Tools that actively manages passwords for minimum requirements and regular updating

**\* Requires Essential Cyber Security Package**

## Advanced +

### SIEM & Network Compliance

Complete SIEM services and SOC support with real-time alerting, network log and activity monitoring to help demonstrate compliance.

### Dark Web Proactive Monitoring

Proactive monitoring of domain(s) for user credentials and password available on the dark web market.

### Profile & Protect Services

Provides advance profiling, risk scoring and identifies specific threat types to your unique environment.

### Endpoint Detect & Respond

Advanced security for endpoints, SOC monitoring and remediation services to stop threats and minimize harm to your environment

**Pricing dependent on devices and workstations being protected**

In order to implement any cyber security offering, client must have foundational security protocols that include a managed firewall and a business continuity solution in place that meet industry base standards. Essential and Advanced Cyber Security services are delivered as packaged products, either separately or together; Advanced+ services can be added individually or as a package to any other cyber security package. ATS can make recommendations if any components are needed to meet foundational security protocols. Note: Adding any cyber security solutions will not completely eliminate all risk, but it will dramatically reduce cyber threats to your business.
