ATS Communications Acquires Superlink Systems, Formerly Known as Olympic Systems, Sacramento's Leading Telecommunications Company

SACRAMENTO, CA — June 24, 2008 — ATS Communications, an industry leader in business communications, announced today that the company has acquired Superlink Systems, formerly known as Olympic Systems, Sacramento's leading telecommunications company. ATS Communications currently serves a number of small to mid sized companies in the Sacramento marketplace. The acquisition enables the company to enhance their market presence as well as provide an even greater level of service to their existing customers. Superlink will now operate under the ATS Communications name and all employees will become members of the ATS team.

"It was our objective to partner with an experienced technology organization with a well known reputation and a strong desire to improve business technology options for companies in this area," said John Zeller, President of ATS Communications. "By combining the strengths of ATS Communications and Superlink Systems, we will offer customers a broader array of products and services. More importantly, the acquisition strengthens the highly experienced team of industry professionals available to support their needs."

Superlink Systems' customers will receive a number of unique benefits not previously available. One example is ATS Communications Partner Plans. "Our Partner Plans allow us to truly act as our client's telecommunications partner," commented Mr. Zeller. "These plans will provide Superlink customers a level of service and support that matches their expectations. Not only do these plans provide coverage for all service and equipment needs for a fixed cost,

they include priority queuing and scheduling, reduced labor rates, preventative maintenance programs and guarantees for response times and available parts. These unique partner plans are unmatched by any other vendor in our region and we're excited to share them with Superlink's valuable customers."

Another example is enhanced carrier services support whereby an ATS Communications carrier services specialist analyzes a customer's current network carrier usage and shows them a side-by-side comparison of costs for equivalent solutions from competing carriers such as AT&T, TelePacific, XO, Covad, Qwest, and Level (3).

Additionally, ATS offers customers the Current Technology Assurance Plan (C-TAP), an innovative program that ensures the telecom and information systems of small to mid-sized companies remain current and incorporate the latest in value added solutions. C-TAP gives companies the ability to refresh or renew their phone equipment any time after 24 months with no change in payment. New equipment and applications are installed without labor charges. Technology can be added as required within a fixed cost that can be absorbed by an organization's operating budget. Essentially, C-TAP allows the continued implementation of new technology within a set budget.

"We have long sought after a physical office presence in Sacramento and building on Superlink Systems base of operations and staff has now made this possible," added Mr. Zeller. "We believe technology should provide companies with a competitive advantage and improved operating efficiencies that will positively impact their bottom line. Through our array of managed services

offerings and support plans designed to lower the total cost of service and ownership, we will help Sacramento companies achieve their business objectives."

ABOUT ATS COMMUNICATIONS

ATS Communications is a leading telecommunications solutions provider of communications equipment and services. ATS has expertise on a complete range of equipment and services that serves small to medium size enterprises with a single location or multiple sites. For over 30 years, ATS Communications has recommended, installed and supported communications solutions that provide business customers with maximum capability and productivity.
