ATS Launches New Managed Data Backup Services

Leading MTSP Provides Businesses with the Latest in Data Back Up Technology

CONCORD, CA – June 15, 2023 - ATS , a leading Managed Technology Service Provider (MTSP), is excited to announce the launch of its new managed data backup services with flexible solutions that prioritizes cloud-based storage while also offering the option for on-site replication, catering to the varying needs of small to mid-sized businesses (SMBs). This managed data backup solution is optimized for peak performance, reliability, and efficiency, which are key to ensure optimal backup and recovery.

As the value of sensitive-client data continues to increase, organizations are finding new ways to secure their clients' information in the most reliable way possible. While many businesses operate with on-site backup appliances, a hybrid approach combining cloud and on-site storage can help mitigate risks associated with obsolescence and inefficiency. ATS 's cloud-first approach eliminates the need for on-site backup devices altogether, allowing SMBs to backup their data, receive patches, maintenance and upgrades.

Sanford Gladding, President of ATS , stated, "Organizations can optimize their backup investments by leveraging managed data backup

services, which ensure data security and immediate recoverability while offering the flexibility of cloud-first and on-site replication options." By leveraging ATS 's data backup services customers can efficiently manage server, workstation, and Microsoft 365® backups and recoveries for multiple locations or customers from a single web-based dashboard. Performing cloud-first data backups translates to significant cost and time savings while ensuring customers' data remains accessible and protected.

One of the biggest drawbacks of data backup is when the process is inefficiently managed. For example, if the customer's managed services provider or their IT department decides to perform a data backup during work hours, it could strain network resources or interrupt bandwidth for other employees on the network. The best data backup systems utilize deduplication and incremental backup capabilities to move up to 60 times less data than conventional image backup products, enabling organizations to back up their data more frequently without causing the aforementioned network issues. This is important because most companies are so competitive that they cannot afford to reduce the productivity of all other employees due to inefficient IT practices. This solution minimizes bandwidth usage,

making daily backups small, lightweight, and cost-effective.

Gladding added, "Every single IT system that an organization implements needs to take cybersecurity into consideration. Cybercriminals have unprecedented access to artificial intelligence-based cybercrime software and it's vital that any data backup solution takes security very seriously." For businesses that want to create an additional layer of security, it's important that files are encrypted using a 256-bit encryption to secure files both in transit and at rest to ensure data privacy, which is exactly how ATS 's new managed data backup solution is configured. This gives management the ability to restrict certain data so that only authorized personnel can access encrypted data with their private key. Additionally, the cloud-first managed data backup solution uses ISO-certified data centers which are located worldwide, with region-specific certifications to maintain strict security and compliance standards.

ATS 's managed data backup solution is a revolutionary cloud-first data protection solution that offers companies a highly efficient and secure way to safeguard their clients' valuable data. By embracing the power of the cloud, ATS delivers top-notch data protection services, helping their customers stay ahead in the

competitive managed services market.

ABOUT ATS

ATS is an industry awarded and respected managed technology solutions provider that partners with businesses to implement the latest enterprise IT networking and infrastructure, unified communications, cyber-security, business continuity, video surveillance and cloud technologies. These products and services are delivered as a proactive

managed service model following our core values resulting in peace of mind that all critical business systems meet expectations of high availability, security, and optimization. With expertise on a wide range of technical offerings, ATS is a business' complete technology partner. Our services match the needs of small and medium-sized enterprises with optimized technology that provides best-practice solutions which creates a competitive advantage and makes a positive impact for the client's bottom line. With over 45

years of experience, ATS has gained an excellent reputation for designing, implementing, and proactively supporting solutions that focus on converging applications allowing the company to grow and partner with businesses throughout Northern California and across the United States. ATS has three California offices located in Concord, Sacramento, and Redding. For more information, call their corporate office in Concord at (925) 602-1500 or visit www.teamats.com.
