As voice and data technologies emerge with new applications, they also converge. What historically has been two separate platforms are now a single network with multiple applications.   As a result, ATS continually evolves our expertise and offerings to continue to be the right partner for businesses.

What are ATS's PRO-IT Services?
PRO-IT means **Professional**, **Proactive and Proficient IT support and management** of all related IT technologies for your business. For over 15 of our 43 years of being in business, ATS has provided consultation, support and solutions for all aspects of our client's IT environment.

Why should I use PRO-IT Services?

Save Time and Money:
PRO-IT Services are designed to save you productivity and money by vastly reducing the risk of downtime with efficient and proactive management of your IT network. With our solutions your network will constantly be monitored and managed to where problems will be identified and resolved before they are even known to your users. Our solutions use technologies to ensure your systems are up and working properly so your internal IT resources can focus on other core business priorities and overall business strategies.

Compliance:
PRO-IT Services include assessments, recommendations and implementation of solutions to ensure your business is meeting compliancy requirements including HIPAA and PCI.

The ATS Difference:
With our extensive history in voice technologies and our expertise in IT, ATS is uniquely qualified to be able to be the single partner to handle all of your technology needs. Most other IT providers won't (or can't) support voice applications on your network: ATS will partner with you to review and implement best practice solutions including integrating voice, data and cloud applications into your business environment.
