Resident Check

IgeaCare
Systems Inc.

The Resident Check module provides the ability to call into the system and perform a check-in and check-out, if necessary, for each resident suite.

With this module, you may assign time slots for check-in and check-out as well as automatic email notification of failed check-ins.

In the event a resident fails to check-in during the appropriate time slot, the system will then perform a call out to that resident requesting a check-in.

If the resident fails to manually check-in, or the automatic call out fails to communicate with the resident, the system will notify staff via email.

Requires either an apoloDS™ or ICS™.

Key Features

Receives inbound calls from resident rooms

Provides outbound notification to resident room with retry attempts for added assurance

Default messages are played when communication is established

Global time features - i.e. check-in 10am and check-out 5pm

Full check-in and check-out functionality

Optional forced DTMF tones (*9)

Date range can be established per resident

Instant reporting to ensure proper check-in and check-out management

Automatic notification via email of failed check-ins, no need to print a report
